Cautionary Statement

This presentation contains forward-looking statements, which are subject to risk factors associated with semiconductor and intellectual property business. It is believed that the expectations reflected in these statements are reasonable. But they may be affected by a variety of variables, many of which are beyond our control. These variables could cause actual results or trends to differ materially which include, but are not limited to: wafer price fluctuation, actual demand, rapid technology change, delays or failures of customers' tape-outs into wafer production, our ability to negotiate, monitor and enforce agreements for the determination and payment of royalties, any bug or fault in our technology which leads to significant damage to our technology and reputation, actual or potential litigation, semiconductor industry cycle and general economic conditions. Except as required by law, eMemory undertakes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events, or otherwise.

Future
Outlook

ememory

eMemory Embedded Everywhere

eMemory's IP seeks to penetrate across all the applications

Core Tech

Security

✓ **Product Applications:**
   eMemory's IP are already applied into different applications, which includes PMIC, LCD driver, Sensors, RFID, OLED Driver, Connectivity IC, DTV, STB, SSD Controller, Bluetooth, TDDI, MCU, Fingerprint Sensor, Smart Meters, Surveillance, ISP, CIS, DRAM, embedded Flash and FPGA.

✓ **Future Target:**
   AP, GPU, CPU, Flash, IoT, AI, autonomous driving

✓ **The Future in Security Chip IP:**
   The rapid growth in AIoT and 5G drive the demand for hardware security. OTP and PUF are indispensable for root of trust in hardware security.

✓ **PUF-based Security Solutions:**
   To satisfy the market needs, eMemory developed a new series of PUF-based security solution, including PUFrt, PUFiot, PUFse and PUFflash.

Embedded Wisely, Embedded Widely

ememory

Our Perspectives

eMemory continue to create value for the industry and our shareholders

Licensing & Royalty

New Application & Technology Development

✓ **Licensing:**
- NeoFuse and NeoPUF will continue to grow due to increasing demand for design license activity and technology platforms that are continuously built among foundry partners.

✓ **Royalty:**
- 8" royalty will grow due to PMIC content increase in 5G smartphone and demand pick-up for automotive and IoT applications.
- 12" royalty will have a strong growth as customers are ramping up productions for ISP, OLED, Networking-related such as WiFi 6, Multimedia-related, DRAM, SSD controller and others.

✓ **For New Business Development:**
- NeoFuse in advanced process is adopted for secure key storage. We expect this will be a trend for security requirement.
- Business activities of PUF-based security solutions are in progress in applications of IoT, IIoT, AI, Blockchain, DPU, UFS, and automotives.
- Partnership with ARM and RISC-V will extend our PUF-based security platform.

✓ **For New IP Technology Development:**
- Developing 6nm and 5nm plus (N5P) technology with leading foundry partners; demonstrated 6nm silicon results successfully.
- Announced crypto processor, PUFiot
- Develop PUF-based solution to be implemented in HSM.

ememory

How PUF Works
for AI Security

Embedded Wisely, Embedded Widely

ememory

Typical AI Security Concerns We Face

We utilize cryptographic operations and keys to ensure security

Data in transit
Confidentiality

Plain text — O🔑 — AES

Data Integrity

Hash → Forged

Authenticity

O🔑 — MAC

Non-repudiation

P🔑 S🔑 — ECC

Signature

A

B

Data at rest
Confidentiality

ememory
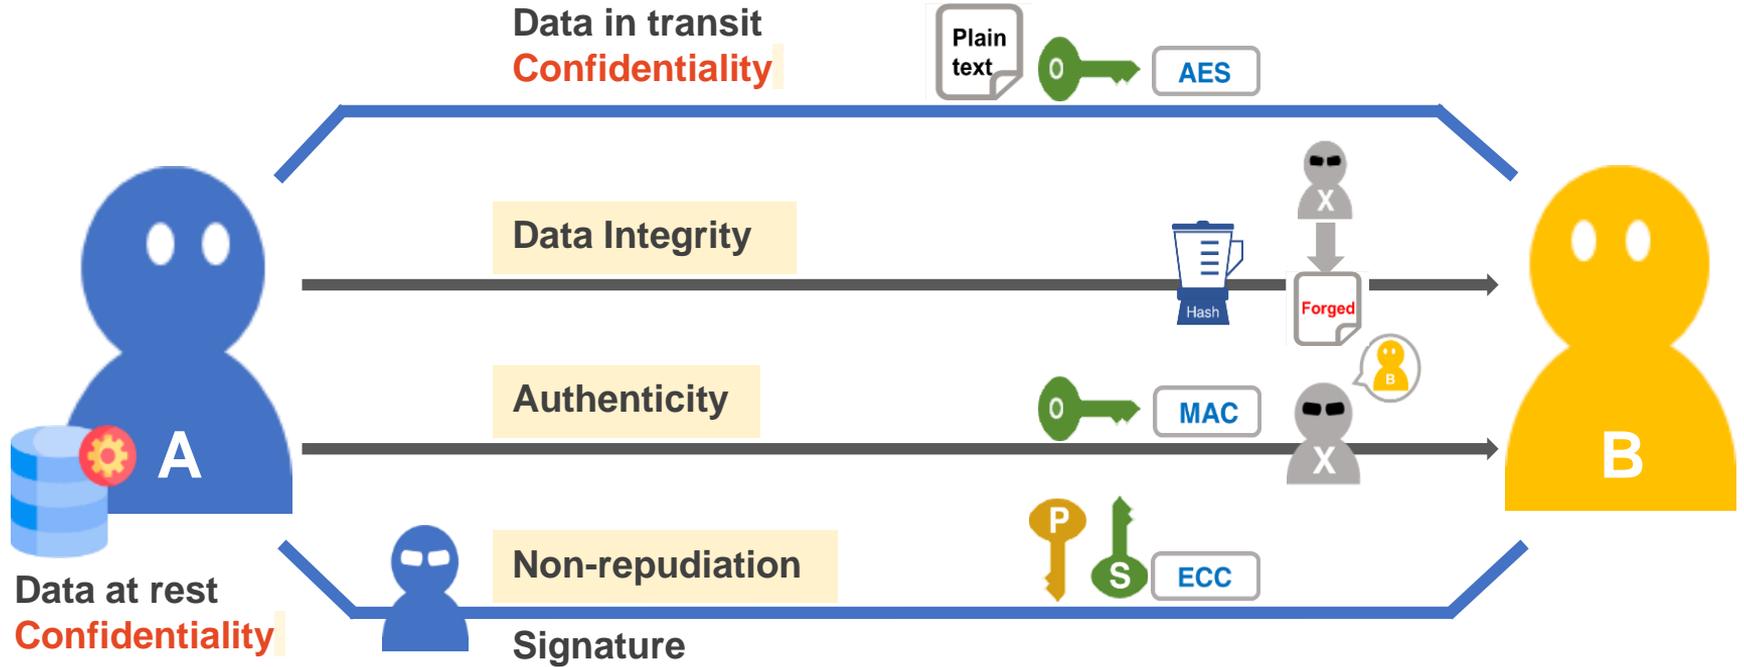

The Foundation of AI Security: RoT

We refer to the anchor of secure device as Root-of-Trust (RoT)

- Protecting keys right from generation is therefore pivotal

Key Generation 1

Key Storage 2

Crypto Engine 3

Cipher 4

Embedded Wisely, Embedded Widely

ememory
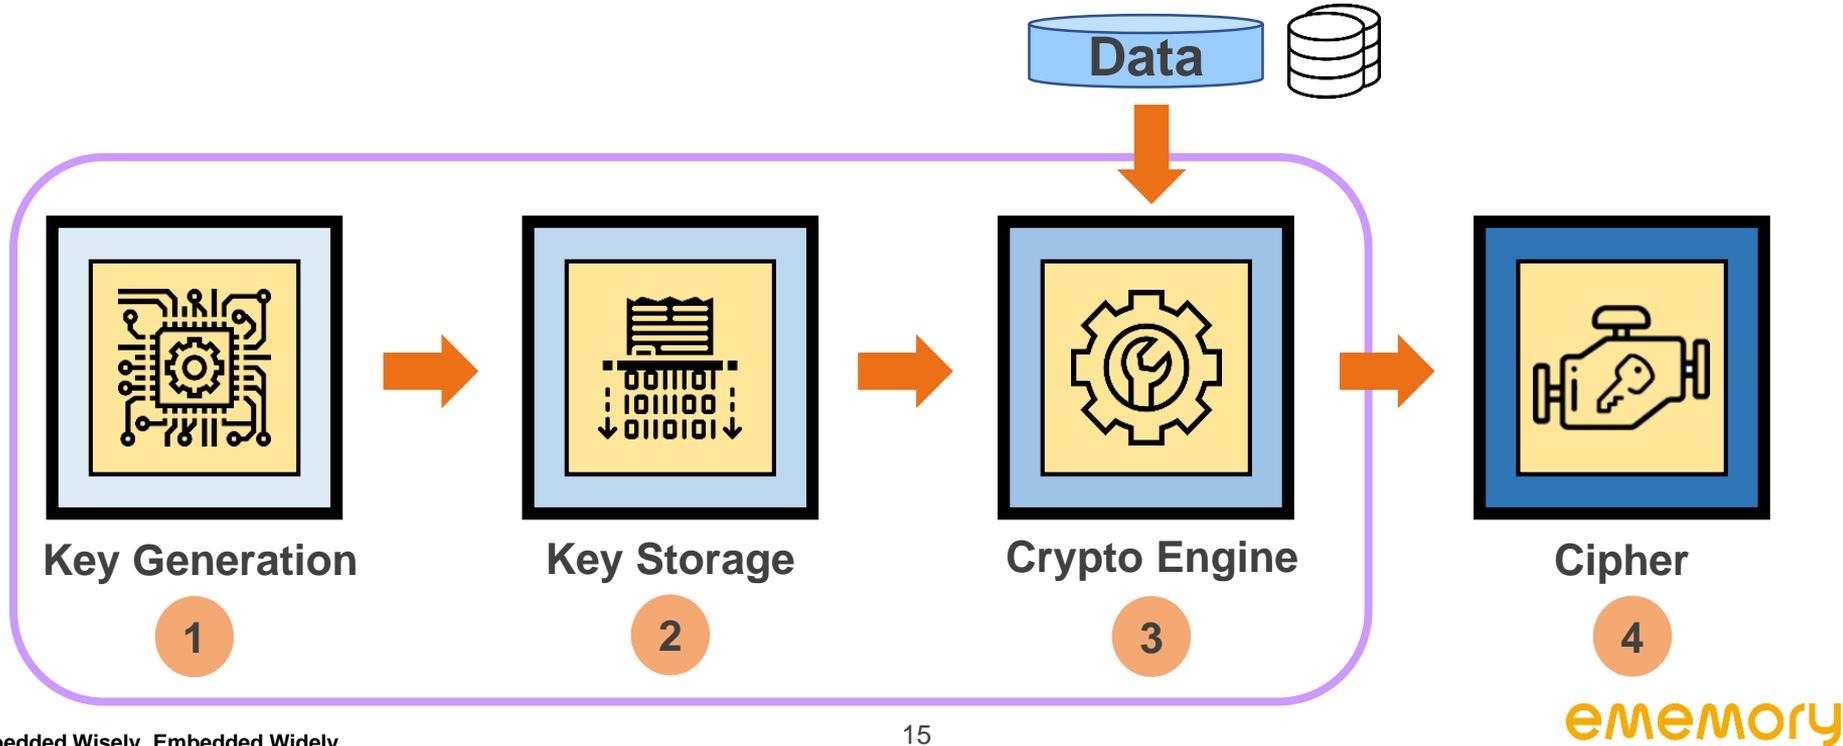

Towards a RoT for AI Security

Generating key, storing key and using key in cryptographic operation

---

- It all comes down to 3 essential problems to solve.

How can we generate secret key?

Utilize process variation → Chip Fingerprint

How can we store keys securely?

Static & Dynamic Entropy from Root-of-Trust

How can we secure key usage in operations?

Equip Root-of-Trust with complete set of algorithms

Embedded Wisely, Embedded Widely

ememory

NeoPUF: The Inborn Chip Fingerprint

A truly random sequences for applications with high security requirements can be generated

- NeoPUF utilizes Quantum Tunneling mechanism to generate a one-and-only "biometric identifier" of each and every chip
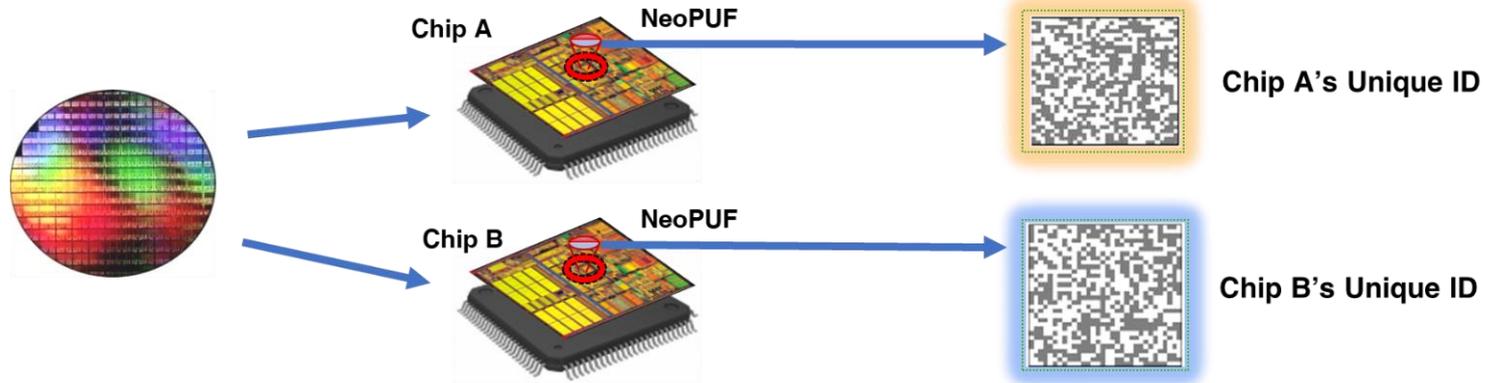

Unique　　**Random**　　**Reliable**　　**Untraceable**

Embedded Wisely, Embedded Widely

ememory

PUFrt: A PUF-based Hardware RoT

PUFrt integrates altogether key generation, key storage, and entropies to protect operations

PUFrt

PRTC (APB)

PUFuid | **PUFtrng**

PUFkeyst

Secure OTP
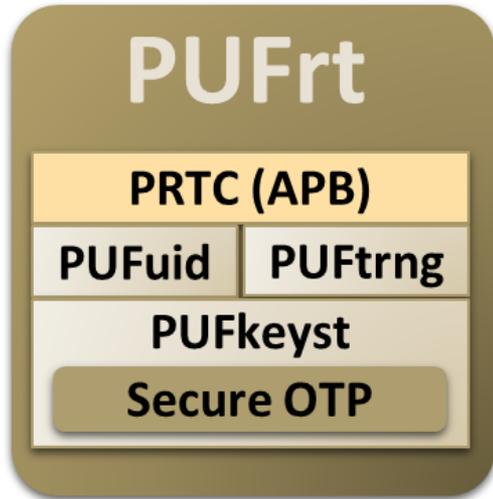

A Highly Integrated PUF-based HRoT with complete Anti-tampering Design

On-chip UIDs
for Authentication

PUF-based TRNG
for crypto usages

Secure Key storage
for asset protection

Embedded Wisely, Embedded Widely

ememory

PUFiot: A PUF-based Security Crypto Processor

PUFiot incorporates crypto-algorithms, enabling all security functions

A HW Crypto processor with entropy protection on data, keys and crypto operations

PUFiot

PITC (APB)	DMA (AXI)	
SQC	KWP	KDF
AES	PUFuid	PUFtrng
HASH	PUFkeyst	
ECC	Secure OTP	
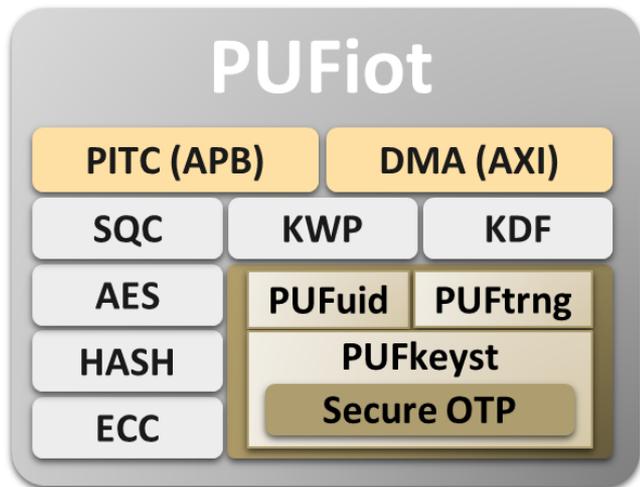

- Key Generation
- Key Wrapping

- Symm. & Asymm. Authentication

- Integrity Check
- Encryption

- Secure Boot
- TLS
- Key mgmt.

ememory

PUF-based Solutions Secure All AI Operations

PUFrt and PUFiot enhance security functions during AI operations

AI Operation / Security	Threat Model	Countermeasure	Security Function	Security Solution
Device Boot & Authentication	• Malicious FW loaded • Unauthorized device	• Secure Booting • Authentication and Provisioning	• Secure key storage • Unique Identifier (UID)	**PUFrt** PUF-based Root of Trust
Model Training & Deployment	• Training Data stolen • Model stolen from edge • Data/Model Modified	• Protect data-in-transit • Protect deployed model • Integrity Check	• Data/Model Encryption • Hashing and Signature	**PUFiot** PUF-based Crypto Processor
Input & Inference	• Unauthorized user • User data privacy leak • Input/Result tampered	• Authentication and Provisioning • Protect data-at-rest • Ensure integrity/source	• Unique Identifier (UID) • Data Encryption • Hashing and Signature	**PUFiot** PUF-based Crypto Processor

ememory

Summary: PUF-based Solutions for AI Security

The underlying benefit of using a PUF in cryptography is its "uniqueness" and "unpredictability"

NeoPUF-based Hardware Root of Trust, **containing NeoPUF and OTP, provides**

- **Unique Identity**
- **Secure Key Storage**
- **True Random Number Generator**
- **Anti-Tampering Solutions**

Plus

- **High Manufacturability**
- **Ultra Low Cost**

A High Value Proposition for Secure AI Applications

Embedded Wisely, Embedded Widely

ememory

PUF-based Solutions Safeguard Products Throughout Entire Lifecycle

③ **Software & Data Protection**

SoC

⑧ **Anti Counterfeit**

⑤ **Authentication**

Key Pair

PUFiot

PITC (APB)	DMA (AXI)	
SQC	KWP	KDF
AES	PUFuid	PUFtrng
HASH	PUFkeyst	
ECC	Secure OTP	

Cloud Server

⑥ **Secure Communication**

① **Unique ID**

④ **Secure Boot**　② **Secure Key Storage**

⑦ **Secure Update**

Quarterly Revenue Pattern

eMemory's quarterly revenue pattern

✓ 1st month: Receive License Fees of the month and Royalty from most foundries on previous quarter's wafer shipments.

✓ 2nd month: Receive License Fees of the month and Royalty from other foundries.

✓ 3rd month: License Fees Only.

   Note: One foundry pays royalty semiannually, reported in Jan and July revenue.

(Unit: NT$ 1,000)

Embedded Wisely, Embedded Widely

ememory
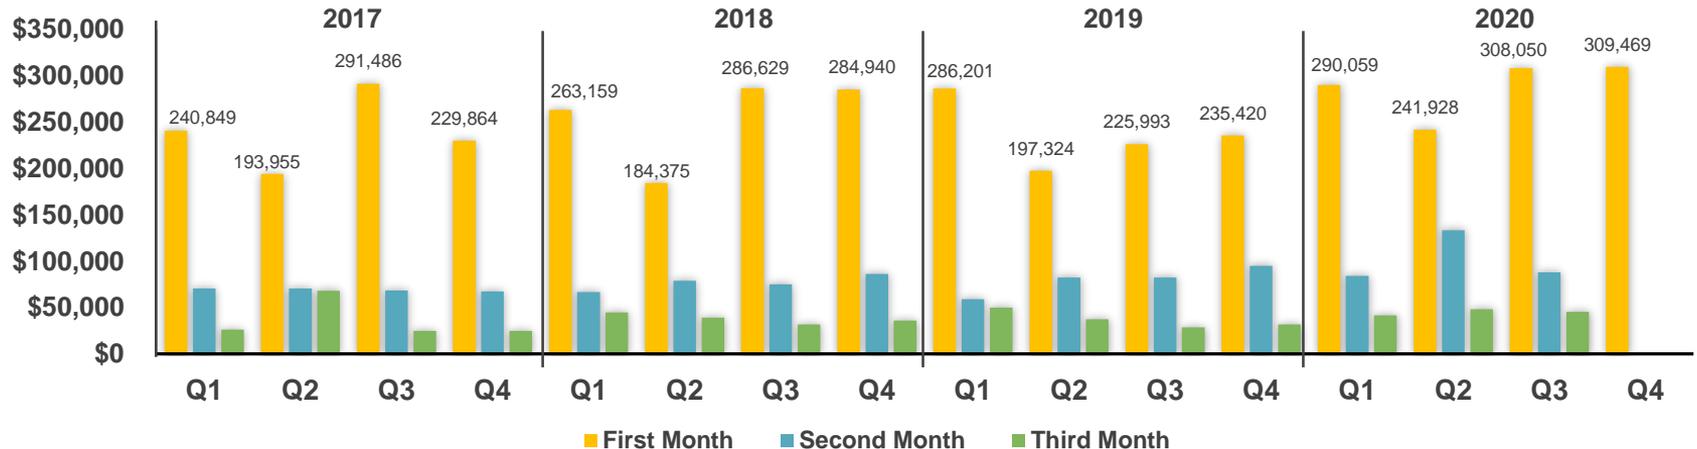

Worldwide Customers

Our IP solutions are adopted by leading foundries, IDMs and fabless worldwide

Country	Foundry	IDM	Fabless
Taiwan	4	1	302
China	8	0	812
Korea	4	0	87
Japan	4	7	64
North America	1	1	306
Europe	2	1	177
Others	1	0	76

Embedded Wisely, Embedded Widely

ememory

Business Model

Recurring royalty is the backbone of our business

Revenue Breakdown

- ✓ 70-75% revenue are from royalty based on wafer production
- ✓ More adoption = more volume shipment
- ✓ More advanced node wafers = higher ASP per wafer
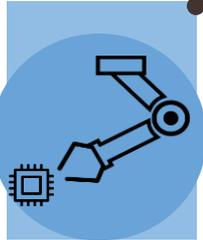

1-4 years

1-4 years
